
Spearman rank correlation with outcome:
built reefs: $\rho = 0.72$, $p_{perm} = 0.021$ (n = 10)
incl. Burkitts*: $\rho = 0.43$, $p_{perm} = 0.206$ (n = 11)
modelled volume: $\rho = 0.93$, $p_{perm} = 0.005$ (n = 8)

Colour + label = reef
- stated volume (source)
- volume of the 3D model
- joins the two volumes

Shape = outcome
- works
- works rarely
- mixed / disputed
- does not work

* Burkitts: natural reef reshaped (about 300 m^3 of rock moved)
