

Lines (all are constant slopes Δh / L)

- ξ_b = 0.4 and 2.0, T = 10 s (1:31, 1:6.2)
- ξ_b = 0.4 and 2.0, T = 7 s (1:22, 1:4.4)
- Mead class limits Y = 1.6, 1.9, 2.5, 3.1 (slopes 1:12, 1:17, 1:26, 1:35)
- Albany only: second cut through the take-off peak (thin line joins it to the ride-section cut, Fig. 1); see Appendix E

Breaking intensity (Mead 2000, vortex ratio Y)

- beyond extreme, Y < 1.6 (steeper than 1:12)
- extreme, Y 1.6-1.9 (1:12-1:17)
- very high / high, Y 1.9-2.5 (1:17-1:26)
- medium, Y 2.5-3.1 (1:26-1:35)
- gentle, Y > 3.1 (gentler than 1:35)

Outcome (shape)

- works
- works rarely
- mixed / disputed
- does not work
- unknown (hollow)
