
Plan view looking seaward (seaward up, north not up). Red φ_0 = assumed value.
Every panel uses the axis ranges of the Albany panel (1×, bar = 50 m) divided by its zoom factor; labelled panels are zoomed by that factor, bar as marked.
The shoreline (y = 0) is at the same height in every panel; no panel has an axis break.

- - - main profile cut (Figure 1; Figures 4, 5, 7-9) ——— reef arm used for the peel angle φ_0
····· second cut kept in Figure 4 (Albany only)
