
Spearman rank correlation with outcome:
built reefs: ρ = 0.72, p_{perm} = 0.021 (n = 10)
incl. Burkitts*: ρ = 0.43, p_{perm} = 0.206 (n = 11)
modelled volume: ρ = 0.93, p_{perm} = 0.005 (n = 8)
as built (Narrowneck mound 13,495,
Opunake built ~3,400 m^3): ρ = 0.87, p_{perm} = 0.003 (n = 10)

Colour + label = reef
stated volume (source)
volume of the 3D model
joins the two volumes

Shape = outcome
works
works rarely
mixed / disputed
does not work

* Burkitts: natural reef reshaped (about 300 m^3 of rock moved)
